### ***Rocky Mount: Arch Suspension Bridge over Tar River TIP Project E-3122***

The City of Rocky Mount has completed an important phase of the Tar River Greenway by installing a 220-ft laminated wood pedestrian bridge over the Tar River. This is the longest wooden, clear-span greenway bridge in North Carolina. The NCDOT's Division of Bicycle and Pedestrian Transportation and Structure Design Unit worked with the city's consultant engineer and the bridge manufacturer, EnWood Structures, to approve the design of the timber bridge.
